 Result	<p>Since this was not a formal split test there are not significant results. We can see trends but, as both ad sets performed extremely well, there is little to gather beyond this being quality content, set up with appropriate price auctioning and objectives.</p> <p>Incredibly, both videos, regardless of differences in spend and impressions, ended up costing \$0.003 per engagement — that is the accurate number of zeros — it cost 1/33rd of a penny for every view of this video.</p> <p>Given there were no follows that were able to be recorded, it would be easy to write this off as not worth running. But you can't argue with that cost for that reach.</p> <p>Instead, a better strategy would be to replicate this success, but try different strategies to encourage users to engage especially by commenting.</p> <p>Notably however, you can see the reel was saved and sent to other users using the in-app analytics. It does not appear that metric has been integrated into the ad platform as of yet.</p> <p>Some final numbers for the combined campaign.</p>

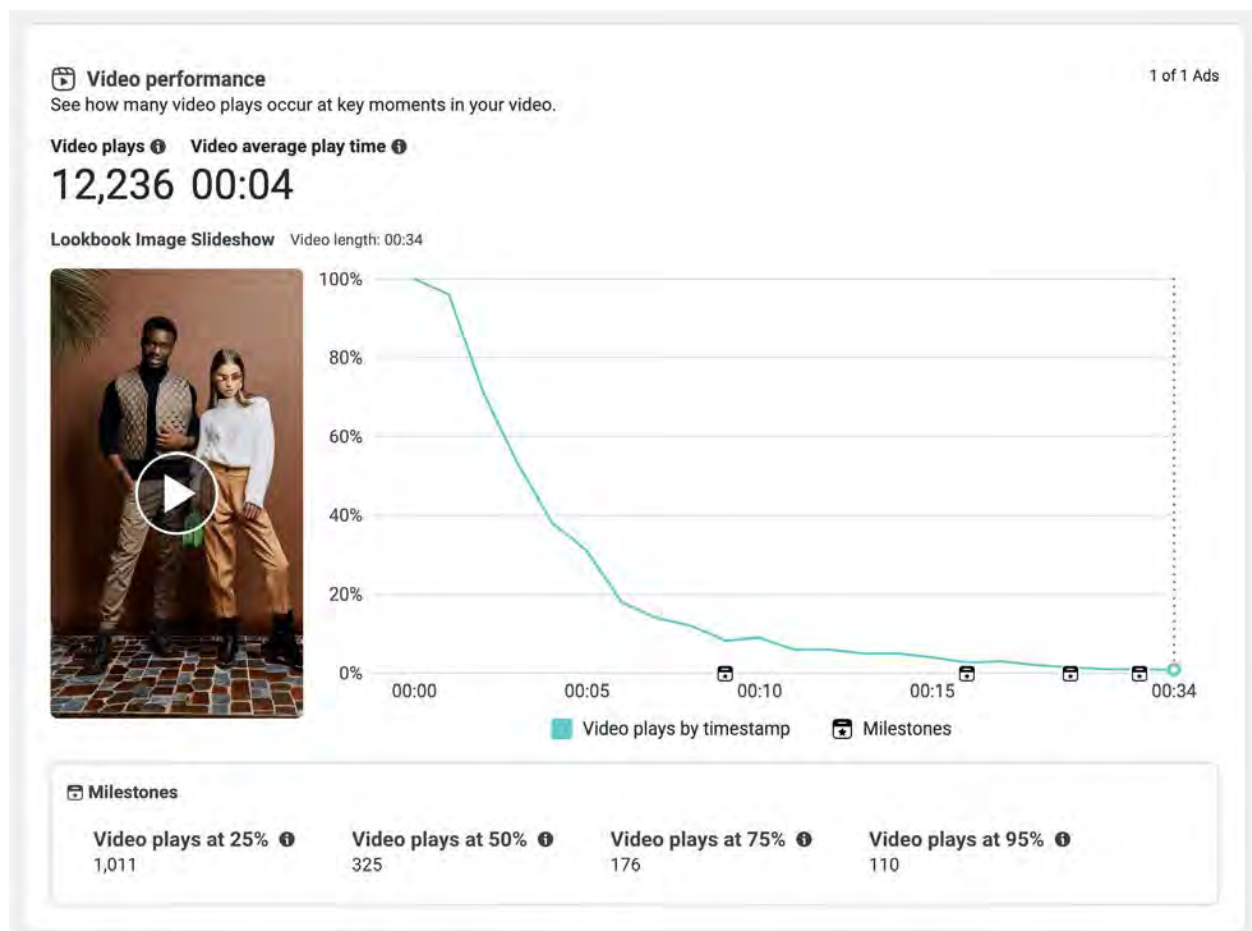

- Total Impressions: 29,822
- Total Spent: \$37.91
- CPM: \$1.27
- Page Engagement: 13,819
- Cost per Page Engagement: \$0.003
- Video Plays at 25%: 1,187
- Video Plays at 50%: 397

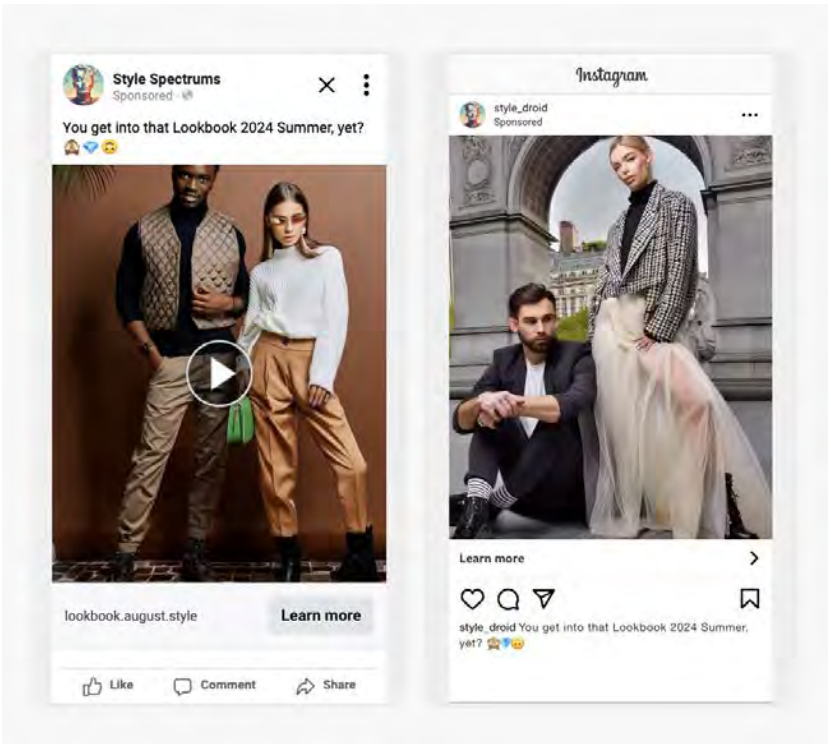

Insight: Extremely cost-effective for generating engagement and video views, with a very low CPM and cost per engagement.
