≔ Detail Tags	

Is there a plan for clicking the tags? I'm assuming not since there are so many. But then can we remove the UI where an X to close the tag shows up on hover and instead have it change hue or shade?

The arrow at the top nav bar is facing the wrong direction. When we hover over either the arrow or the text, can both please change to teal like when you hover on hyperlinks on the home nav bar?

Real-Time So

For the footer, I don't mind no white bar but can we make sure there is the copyright like on the front. Then instead of the other wording hyperlinks (which need a color when hovered on), let's just say Contact and About which both go to their respective mid-page locations on the home page.
